Platform Overview

**Transform your users into a
cyber security asset.**

Platform Stack

Reduce human cyber risk with one comprehensive solution - simplified through automation

usecure is a global provider of computer-based cyber security awareness training, offering the market's most efficient, cost-effective and admin-lite solution for reducing insider threats.

Through intelligent automation, usecure combines continuous training with regular phishing simulations, simplified policy management and behavioural risk scores - enabling you to assess and mitigate your organisation's human cyber risk with leading technology and a user-first approach.

uLearn
Cyber Security Awareness Training

Drive cyber security awareness with user-tailored training.

uPhish
Phishing Simulation Software

Determine user vulnerability to sophisticated phishing attacks.

uBreach
Email Account Exposure Check

Identify and safeguard exposed employee email accounts.

uPolicy
Policy Management Software

Simplify policy management and ensure user acknowledgement.

Risk Score
Behavioural Cyber Risk Calculator

Understand your organisation's human cyber risk.

uLearn

Reduce insider threats with user-tailored security awareness training

uLearn enables your organisation to easily deploy continuous security awareness training in the most time-efficient and cost-effective way.

Packed with engaging training content, uLearn crafts user-tailored programmes and eliminates repetitive admin tasks through automation - reducing insider threats, data breaches and ransomware, while meeting the demands of compliance standards such as GDPR and PCI.

Assess vulnerabilities and build a risk profile

Drive awareness with continuous training

Track progress and demonstrate compliance

Key Features

Rapid deployment & automated admin

By enabling the 'AutoEnrol' feature, uLearn launches your users' training instantly and manages admin tasks.

Deliver programmes unique to each user

uLearn identifies initial user infosec vulnerabilities, then prioritises their courses to strengthen these areas first.

Library of infosec & compliance courses

Educate your users on an ever-growing library of information security and compliance-based courses.

Build courses unique to your organisation

Easily create custom courses unique to your business, all with uLearn's unique 'Custom Course Builder'.

Video & Interactive Course Content

Keep your users engaged and maximise knowledge retention with video and interactive content.

Custom Reporting & Weekly Summaries

Assess different departments of your business and obtain weekly progress reports.

uPhish

Assess user vulnerability to sophisticated phishing attacks

uPhish automates regular phishing assessments alongside your users' training programme, determining user risk towards common attacks while ensuring training effectiveness.

Your automated feature, AutoPhish, periodically deploys a range of common phishing attacks, tracking real-time compromised rates and highlighting key trends.

*(**Note** - simulations can be automated or deployed manually)*

Determine user susceptibility to phishing

Automate regular phishing assessments

Empower users to combat sophisticated attacks

Key Features

Automate regular phishing simulations

Enable 'AutoPhish' and automate regular simulations (templates and frequency are customisable).

Choose from realistic pre-made templates

uPhish comes with a library of pre-made templates impersonating some of the world's most trusted brands.

Easily create custom phishing templates

Easily create custom templates and deploy simulations impersonating internal communications.

View real-time compromised rates

Gain an insight into how your users interact with phishing attacks in real-time.

Customise reports and segment user groups

View in-depth reports and segment users based on departments, seniority and more.

Spot common trends & key user insights

Digest your users performance and behaviour over a custom period of time.

uBreach

Identify and safeguard exposed employee email accounts

With millions of email login credentials exposed online due to third-party data breaches, users with vulnerable accounts could be targeted by social engineering and business email compromise (BEC) attacks.

uBreach quickly identifies which employee accounts are exposed in data dumps, paste sites and hacking forums, as well as which service leaked the user's details and what sensitive data is available.

Identify user accounts that are exposed online

Automate continuous exposure checks

Educate users on how to keep accounts safe

Key Features

Quickly locate exposed user email accounts

uBreach will rapidly identify which email accounts are at risk - bringing your results back in minutes.

Search online data dumps and paste sites

uBreach conducts a deep web investigation into hacking forums, paste sites and data dumps.

Obtain full exposure report in minutes

View your organisation's overall breaches and assess individual account exposures.

Learn what data is publicly disclosed

Identify the exposed data of each user - including usernames, passwords, phone numbers and more.

Automate regular exposure checks

uBreach will automatically run regular exposure checks and update your dashboard for quick viewing.

uPolicy

Simplify policy management and ensure user acknowledgement

Manually updating users on policy updates and chasing signatures is a time-consuming, outdated and ineffective approach.

uPolicy simplifies policy communications and user acknowledgement by automating the process - sending policy changes directly to your users' inbox and tracking who has opened and signed their document.

Automate policy communications

Ensure user acknowledgement

Track signatures and automate reminders

Key Features

Notify staff of new corporate policies

Have new corporate policies sent directly to your users email inbox.

Update users on policy amendments

Ensure policy updates get communicated by delivering and tracking updated docs via email.

Use pre-made policies or create your own

uPolicy contains a library of pre-made policies, incl. Data Breach Response, Email, Acceptable Use and more.

Upload custom policies

Deliver and track your organisation's custom policies within uPolicy

Track who has or hasn't signed

Identify which users have opened your policy document and which have provided a signature.

Risk Score

Understand your organisation's human cyber risk

Determining the human risk-level of your organisation and assessing how your users are progressing can be difficult to measure.

Risk Score quantifies your employee threat-level by collating various behavioural metrics from the usecure stack, and collating them into an overall grade.
(Low-High for end-users, 0-900 for entire organisation)

Assess your organisation's human risk level

Dig deep into individual risk score

Visualise how user risk changes over time

Key Features

View overall risk level from your dashboard

Access a high-level overview measuring your organisation's risk score from 0 (low) to 900 (high).

Access your users' individual risk scores

View the risk profile of your users, ranging from high, medium to low.

See how user scores change over time

Assess how your organisation's risk score changes over a 12-month period.
